

Do you have
knee
osteoarthritis?

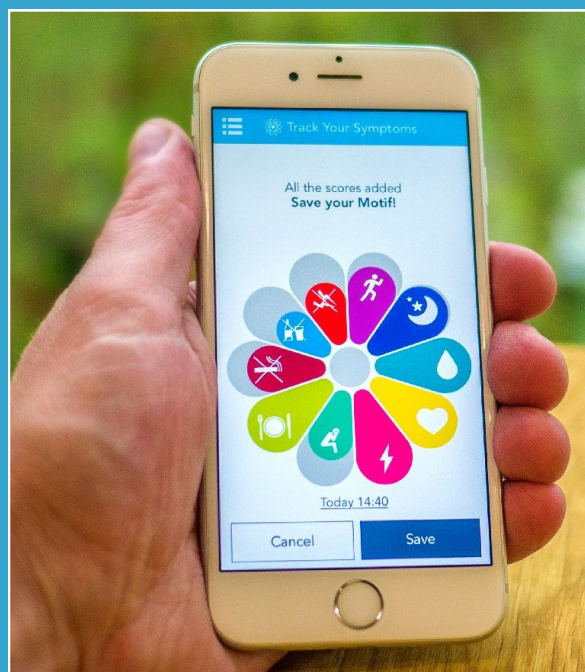

Are you
aged 50 or
over?

Do you
own a
smartphone?

Borrow a smartwatch and help our research team to improve our understanding of chronic pain.

We are looking for 100 people from Greater Manchester with knee osteoarthritis to take part in two studies that use smartwatches and smartphones to explore the relationship between activity and pain, and weather and pain.

Involvement in the project will last for three months, and participants will be loaned a smartwatch for the duration.
